Formulize 2.0.4 Beta Patch

Readme

By Freeform Solutions

October 19, 2005

Overview

This patch requires the full Formulize 2.0 package. It does not work on its own; it is only useful for updating a previous Formulize 2.0 installation to version 2.0.4.

Installation

1. Extract the patch files and copy them over top of the existing Formulize files.

2. In System Admin—Modules, update the Formulize module.

3. ***If you are updating from a version of the module prior to version 2.0.3, then do this:*** In System Admin—Formulize, ie: the main admin page of Formulize, change the URL to this:

    http://www.yoursite.com/modules/formulize/admin/formindex.php?op=patch203

    A button will appear at the very bottom of the screen. Click it to make one change to your database so that the new "display form elements per group" feature works correctly.

    How do I know what version I have? If the modification date of your formulize/xoops_version.php file is prior to August 31, 2005, then your version of the module is prior to version 2.0.3 so you should complete this step.

More Information and Support

Freeform Solutions is actively developing Formulize, with support from the community. You can post issues, questions, feedback, problems, etc on the dev.xoops.org website in the Formulize area. We will attempt to respond to all postings as soon as possible.

Further documentation will be released on dev.xoops.org as it becomes available. There is a white paper called *How to Manage Business Processes Using the Internet* which gives a high level overview of how Formulize and Pageworks can be used. There is also an "API" document called *Using Formulize and Pageworks to Make Custom Applications* that gives lots of examples and details of the various functions that you can use within Pageworks to access forms and data.
